QUAYLE ACTION

This application is in condition for allowance except for the following formal matters:

The specification, page 1, the title, the word "MONOCHROME" should be - - MONOCHROME - -.

The drawings are objected to because in Figure 1, step S2, there are two "the the", therefore one of the "the" must be deleted. Furthermore, Fig. 1, from step S2 to step S3, the decision should be "No", instead of "Yes". In the specification, page 4, lines 7-9, recites "additional blocks P are added if the monochrome image blocks do not comprise a multiplier of the minimum calculating unit". Fig. 1, step S2 to step S4, the decision should be "Yes", instead of "No".

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of

Art Unit: 2676

the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

None of the prior art made of record teaches or suggests a method for converting monochrome images comprising steps of:

blocking a monochrome image;

obtaining pixel values of monochrome image blocks;

layered mapping of the monochrome image with equal grayscale to obtain color values of equal grayscale layers for the monochrome image;

assigning each of the equal grayscale layers a corresponding color; and

matching the monochrome image blocks with colors corresponding to the equal grayscale layers according to the color values and the pixel values.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

-The closest prior art, Fujimoto (5,751,921) shows (Figs. 4 and 5) a document image processing device for converting monochrome images to color images including a region segmentation module (231) for segmenting the input image shown in Fig. 5 into regions in which characters are arranged in blocks (character block regions). Fujimoto further discloses a character image conversion module (233) converts bitmap data values of a monochrome image into pixmap data values of a color image (step 408).

However, Fujimoto fails to disclose the claimed "layered mapping of the monochrome image with equal grayscale to obtain color values of equal grayscale layers for the monochrome image; assigning each of the equal grayscale layers a corresponding color; and matching the monochrome image blocks with colors corresponding to the equal grayscale layers according to the color values and the pixel values."

-Sharma (US 2003/0103241) discloses a color continuous tone image is separated into color layers. A plurality of weighting factors are selected that control how error is diffused to subsequent color layers as each color layer is halftoned.

-Fukuda et al (5,867,593) disclose an image region dividing apparatus includes a same-kind image region extraction unit for dividing a digital image into blocks.
